

Kyle Holmberg  
CIS 415 - Operating Systems  
Project 2

Compiles and runs on VM  
Project ended up working perfectly, as far as I can tell!

Biggest issue I had:

After a few hours of fixing pointers with Professor Sventek, I had most packets going across the network with no issues, but I did occasionally get this issue:

**[DRIVER> Warning: No replacement Packet Descriptor, discarding data.**

The issue occurs only sometimes, and specifically after a packet is received.

The fix lay within the receive\_thread function. I had improperly created the else clause.
